## nursemate® 50 with Immu-PRIME®

nursemate® 50 with Immu-PRIME is a high performance colostrum supplement that begins protecting the newborn naturally. This potent blend of proteins, fats and vitamins has strong immunomodulatory effects and is high in antioxidant activity. nursemate® 50 also contains a relatively high level of lactoferrin, a protein that limits the growth of Gram-negative bacteria like salmonella, E. coli and other micro-organisms that require iron for their survival.

Quick immune response and activation of the gut is vital for healthy newborn calves. Not only does nursemate® stimulate organ growth and development, but it gets the calf

up and nursing. The immune proteins and other natural defenses found in nursemate® begin protecting the newborn while it is on the ground. 50 grams of absorbable immunoglobulins allow calves to begin absorbing these protective antibodies before nursing or being fed colostrum. nursemate® provides just the right dosage so calves are hungry for their first feeding from their mother.

**INGREDIENTS:** Condensed modified whey solution, whole milk, saccharomyces cerevisiae, vitamin E supplement, sodium selenite

**APPLICATIONS:** Calves need certain proteins and fats as soon after birth as possible to ensure energy and optimal health. nursemate® colostrum supplement powder provides a mixture of essential proteins, lipids, vitamins and carbo-hydrates necessary for a healthy start.

**DIRECTIONS:** Mix entire package (300 grams) with 1-2 quarts warm water or colostrum. Administer entire mixture as soon after birth as possible via nipple pail, bottle or esophageal feeder. Each dose contains 50 grams of globulin protein.

**STORAGE:** To maintain maximum freshness store in a cool, dry location. nursemate® can be kept at or below 70 F for several months without adverse effects.
